Re Item V

**Reasoned statement with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**

1 Reference is made to the following documents:

D1: US-A-5.503.236

D2: US-A-4.226.288

D3: US-A-5.135.060

2.1 Since none of the cited prior art documents discloses the subject-matter of independent claim 1, it is considered to be new (Article 33(2) PCT).

2.2 The problem to be solved by the present invention may be regarded as providing a drilling tool that has a flexible shaft so as to be able to make short radius curves while still being able to transmit torque and axial loads (see page 2 paragraph 6 of the application).

The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) for the following reasons: the drilling tool comprises a series of coaxial ring members wherein each ring member is connected to an adjacent ring member by a connecting member arranged to transmit torque therebetween and axial supports extend between adjacent ring members so as to transmit axial loads therebetween.

2.3 Claims 2-24 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.

Re Item VIII

Certain observations on the international application

The application does not meet the requirements of Article 6 PCT, because claim 1 is not clear.

Claim 1 does not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. The claim attempts to define the subject-matter in terms of the result to be achieved ("a connecting member arranged to transmit torque" and "axial supports extend between adjacent ring members so as to transmit axial loads therebetween"), which merely amounts to a statement of the underlying problem, without providing the technical features necessary for achieving this result.
